Lampshades with porous- or digital printing

Lübke & Driller is able to print your lampshade at all points multifarious. In combination with your logo or your special motive it becomes a decorative advertising medium. In this way it is predestine for use in store construction, object business or for gastronomy and hotels.

The motive

- We are able to print your special motive in all colours. You are free to choose this according to your wishes. Whatever it is a picture, a drawing or text. Combinations are also possible. The lampshade can be produced in well-known shapes up to an outer diameter of 2 metres.

- We adjust the size of the motive according to the size of the lampshade. Then your small table lamp harmonizes together with your big suspended lamp.
- If you wish anything else than a logo: In this case you can choose a motive after your wishes. Perhaps we are able to obtain it or we choose it together. Referring to this we create a printable data file. In case you have a data file we make sure that it will become printable.
- Or: In the case you have an own logo or subject, we adapt these to a printable version.
The printer's colour is equal to your colour.

The method

- According to the size of the lampshade or of the motive we produce your lampshade with porous- or digital printing.
- Printable are textiles or films. If you like:
We define the number and placement of the lighting units for you.
We take care of wiring the lamp shade, including the necessary connecting cable.
... and that's how we put your company's logo in it's true light.

Your result

You have a distinguished advertising medium. It is decorative and fulfills the illumination. We would be glad to receive your inquiry soon...
